1. This is an individual research-based assignment. Plagiarism will result in zero marks.
2. All answers must be written in your own words, supported by references (APA 7th edition).
3. Minimum two academic references per question are required.
4. Neat, legible handwriting is mandatory. Untidy work may be penalised up to 20%.
5. Late submissions will lose 25% marks per day after the due date.

Trace the historical evolution of multimedia from early audiovisual aids to modern interactive digital media. In your answer, clearly define and differentiate the terms **multimedia**, **hypermedia**, and **hypertext**, providing at least two real-world examples for each.

*Answer:*

Compare and contrast the **Cognitive Theory of Multimedia Learning (CTML)** proposed by Mayer (2021) and **Paivio's Dual Coding Theory (DCT)**. Your response should address:

- (a) Core assumptions and psychological basis of each theory.
- (b) How each theory explains the role of verbal and pictorial channels in learning.
- (c) A critical analysis: in what instructional scenarios would one theory be more applicable than the other? Justify with examples.

Critically analyse the implications of **Cognitive Load Theory (CLT)** for the design of multimedia learning environments. Additionally, explain the **Four-Component Instructional Design (4C/ID) Model** and discuss how its four components — learning tasks, supportive information, procedural information, and part-task practice — can be integrated into a multimedia course on computer networking. Support your answer with evidence from scholarly literature.

Marks Summary

| Q#    | Max Marks | Obtained | Remarks |
|-------|-----------|----------|---------|
| Q1    | 8         |          |         |
| Q2    | 10        |          |         |
| Q3    | 12        |          |         |
| Total | 30        |          |         |
